Education

Northumbria University at Newcastle

2024 - 2027

BSc (Hons) Computer Science

Work experience

Solute

June 2026 - September 2026

Internship

London(Remote)

- Owned end-to-end delivery of client websites at a small engineering studio — requirements, development, testing and deployment — working directly with client stakeholders on scope and priorities.
- Selected and applied the right technical approach per project (hand-coded HTML/CSS/JavaScript/React vs. CMS platforms), balancing client requirements, timeline and maintainability.

Volunteering

Dialogue Society

November 2023 - Present

Project Manager

Newcastle Upon Tyne, UK

- Coordinate community-focused projects and events promoting social cohesion and intercultural dialogue.
- Manage volunteers, plan activities, and ensure timely execution of project goals.
- Collaborate with partner organizations to expand outreach and engagement.

Mentor Wise

September 2024 - Present

Student Mentor

Newcastle Upon Tyne, UK

- Provide guidance and support to first-year students transitioning into university life.
- Help mentees navigate academic and personal challenges, promoting well-being and success.
- Develop communication and leadership skills through regular mentoring sessions.

Technical skills

Programming Languages

Java, Python, JavaScript/TypeScript, SQL, C

Tools/Platforms

Docker, Git/GitHub, Linux (Ubuntu), WebSockets, REST APIs

Frameworks/Libraries

React, Node.js/Express, FastAPI, Tailwind CSS

Projects

Fitness Tracker App

React, Node/Express, PostgreSQL

- Designed and built a full-stack application end-to-end, including a normalised relational schema in PostgreSQL and a REST API backend with Node/Express.
- Applied object-oriented design principles to structure the backend into maintainable, testable modules; built and deployed a responsive React frontend for public use.

RAG Chatbot

Python, embeddings, vector search

- Built a Retrieval-Augmented Generation pipeline making a large personal text corpus searchable via natural language, including a custom web crawler and embedding pipeline.
- Queried a vector database for semantic search and used LLM tool-calling to ground responses in retrieved passages rather than model memory.
